West Hawai‘i: Southern cell

Peak heat stress

2019

Random forest vs. persistence

Peak DHW (°C-weeks)

14 0.0

RF improvement over persistence (%)

70 -70

Layout Context
Seven-day SST forecasts, frozen model, evaluation: 2015–2025
RF skill (%) = 100 × (1 − RF MAE / persistence MAE);
MAE = mean absolute error.
DHW summarizes evaluated target dates. Results cover three selected cells.
Data: NOAA Coral Reef Watch via PacIOOS.
